

EZ PROFESSIONAL BALLOON DANCE FLOOR CANOPY

MADE WITH BOSS 4" SPACES NETTING

B.O.S.S.Big Over Sized Spaces Netting.

BOSS makes it as easy as counting 1 2 3 to make a Perfect Balloon Canopy. We made a new netting die exclusively for YOU, professional Balloon Decorators & Balloon Decorator Products. So enjoy!

Quick steps summary

By simply adding a balloon every third square in both directions, you get a symmetrical evenly spaced professional looking and stable Balloon Canopy for indoor or OUTDOOR USE too.

step by step details:

1) Open netting and stretch top end corner to corner. If available, fasten temporarily to comfortable working height on two column base stand poles. Otherwise, stringing net between two chairbacks to start with will work fine.

2) SIZE AND CLIP or tie first balloon to first top corner square of stretched out netting. Skip two spaces, add another balloon and repeat till top row is filled with balloons. Alternate balloon colors according to theme colors, 1,2,3, or 4 colors. Just continue repeating same color pattern.

3) Repeat for second, third and all rows till complete. BUT at connector rows of netting, where two pieces of netting need to be attached, simply tie or clip the balloon to both edges of two connecting netting squares. This lets you make a canopy as big as you like. Just keep attaching pieces as needed.

4) For indoors, tie four corners to anchor lines and anchor other ends to floor weights or balloon columns. Wrap free end of anchor line in and around two or so clusters of balloons securely.

BUT for outdoors, Weave anchor line in and out along entire edge of two parallel sides of canopy. Secure corners of canopy net to the stretched out line so they do not "ride up" the line. Then anchor loose ends to columns or bases heavily weighted or fastened to the floor.

THE MATH

A BNP17 size net holds 19 x 15 rows of balloons = 285 balloons. For a square 15x15 = 225 balloons. Add 160 balloons if you make 4 of the 8 foot spiral columns with 4 balloons per cluster and 10 clusters per column. So, plan on 400 to 500 balloons depending on your exact choice of dimensions.
